INCANDESCENT KRYPTON A LAMPS

BENEFITS OF INCANDESCENT KRYPTON A LAMPS

- Heavy duty filament provides extra support
- Long life - rated at 10,000 hours
- Energy saving
- Brass base prevents corrosion

Recommended Applications: Decorative, Accent and General Illumination

General Information

Operating Conditions

Lamps can be operated throughout the range of ambient temperatures associated with indoor and outdoor general lighting.

Use only lampholders or fixtures listed by a nationally-recognized testing organization for use with incandescent lamps. Lamps should not be used in equipment where the base temperature will exceed 500°F.

EPACT and Labeling Laws

Radiant lamps meet the minimum efficiency standards set forth in the U.S. Department of Energy's National Energy Policy Act (EPACT). These lamps are also subject to the U.S. Federal Trade Commission's labeling requirements for incandescent lamps. The law requires that packaging prominently features light output (lumens), energy used (watts), and rated life (hours). This information is listed for operation at design voltage.

Base

Krypton lamps utilize high quality, attractive brass bases which will not corrode or freeze in sockets.

Maximum Overall Length

The maximum overall length of a lamp is measured in inches from the top of the bulb to the bottom of the base.

Krypton

Compared with ordinary incandescent lamps, adding Krypton increases life up to 2½ times.

Average Rated Hours

Lamps are designed to deliver their published Average Rated Hours when operated continuously, at suitable line voltage and ambient temperatures, and with a proper ballast and fixture that meet ANSI standards.
